//1010
```

```
64. //1010
65.
66. //coefficients can be handled with an integer for how many, and a pair of ints: step
    and history, which will tell the index of the coefficient in the base case (the only
    time it will be used)
67. //now, for the unity roots, use formula x * 2 % sz to get square simply, in this way
    we can keep only one array of unity roots.
68. //for m current unity roots, when we squere them, all indices will have at least one
    zero to left more in binary notation. So we just need to calculate squares of the
    upper side of argand's diagram. So its new size will be a power of two and the step
    unity will be twice bigger.
69. //args: cfs(how many coefficients), step(for coef), history(parities defined),
    rootstep(size of unity root step), rootam(amount of roots to consider)
70. //so process is simple now:
71. //base case: return coefficient rootam times
72. //regular case: rec(ceil(n/2), step+1, history, rootstep*2, next2pow(rootam))
73. //              rec(floor(n/2), step+1, 1<< st|history, rootstep*2, next2pow(rootam))
74.
75. //now where should we store them?
76. //create array that will store evaluations. So add new parameter Foo *pl, where we
    will store results of shit. When we call recursively, store at end all even- coef
    evals. Then put in current and forget, so use same place for unevens

Laws and facts

Sum of squares
An integer greater than one can be written as a sum of two squares if and only if its prime decomposition contains no prime congruent to 3 (mod 4) raised to an odd power.

Goldbach's conjecture
Every even integer greater than 2 can be expressed as the sum of two primes.

Is Divisible by prime
Given a number M, we want to know if it is divisible by a prime P.

1. Find the smallest K for this condition (KP + 1) MOD 10.
2. N = (KP + 1) / 10
3. Multiply the last digit of M times N and add the result to M without the last digit. (You might use (N-P) as well for the multiplication instead of N, note that it would be a negative number).
4. Repeat until M is short enough.
